

## Smart Power Strips

White outlets are for items such as computer monitors that can be powered down

Blue outlet is for the controlling appliance (such as a computer)

Red outlets are for appliances that must be on at all times (fax machines, etc).

When the appliance plugged into the **blue** outlet is shut off, the strip shuts off all appliances in the **white** section of the strip. Appliances in the **red** section stay on unless the main power switch is flipped.
