The Harvard Law School (HLS) Hauser Hall Basement Office renovation project is the renovation of approximately 4,000 SF within an existing building to accommodate the HLS Finance and Human Resources departments relocating from another Harvard owned building in Cambridge. Hauser Hall was constructed in 1994 as part of the Law School's Campus.

The Finance suite contains five individual offices and an open workspace with four workstations and open meeting area. The Human Resources suite contains eight individual offices, a conference room and reception area. A shared kitchenette is located at the end of the common corridor with a small sink, under-counter refrigerator, microwave and water filter.

General Sustainability Goals - A strong emphasis was placed on not only meeting, but also exceeding both the Harvard University Green Building Standards for Fit-outs and LEED-CI v2009 Certification requirements. The project team carried out extensive research to identify materials with sustainable attributes, whether recycled content, purchased locally, or simply re-used.

In a below-grade space that receives little daylight, the project team worked to balance efficiency, function and comfort by utilizing various lighting types (LEDs, high efficiency linear fluorescents, task lights, etc), as well as interior partitions with transparent glazing to maximize light transmission through the spaces.

**Energy Efficiency**

Hauser Hall has committed, along with Harvard University as a whole, to reduce greenhouse gas emissions 30% below 2006 levels by 2016, inclusive of growth. Therefore, energy efficiency guided the selection of lighting and fan coil units installed as part of the project.

**Mechanical Systems**

**ECM 1: Demand Control Ventilation—CO₂**
Volume of outside air supplied to the conference room is controlled by a CO₂ sensor. The CO₂ sensor increases ventilation rates as it senses an increase in CO₂ levels, which occurs as more people occupy the room.

**ECM 2: Occupancy Sensors**
Occupancy controls for Fan Coil Units with temperature set-point setback. Occupancy sensors are installed in all spaces to turn the fan coil units (FCU) on, or off, based on actual occupancy. Occupancy Sensor time delay is set at 60 minutes to shut-off FCUs.

**ECM 3: Scheduling**
The Hauser Hall HVAC system operating schedule is 6a.m. to 7p.m. seven days a week. HVAC must be manually turned on via override at all other times if the space is in use.

**Electrical Systems**

**ECM 1: Occupancy Sensors:**
Occupancy sensors are installed in all spaces to turn the lights on, or off, based on actual occupancy. Occupancy Sensor time delay is set at 10 minutes to shut-off lights.

**ECM 2: Reduction in Lighting Power Density**
36.53% reduction in Lighting Power Density (watts/square foot) when compared to ASHRAE 90.1-2007 baseline.

**ECM 3: Task Lights—Bulb Swap**
To minimize the energy use of task lights brought into the space by the occupants, Harvard Law School has provided 20-Watt Compact Fluorescent Lamps (CFLs) in exchange for the 60 Watt incandescent bulbs.

**Indoor Environmental Quality**

Harvard Law School is committed to providing a healthy indoor environment for all occupants. The project team was careful to maintain healthy indoor air quality during construction and to also ensure the space promotes healthy indoor air quality during occupancy. To maintain good indoor air quality, the Hauser Hall Basement Offices Renovation only used low VOC products.

WATER EFFICIENCY

38.48% REDUCTION = 13,950 GAL/YEAR
WHEN COMPARED TO EPAct 1992 BASELINE

SLOAN Uppercut Dual-Flush Flusshometer WES-115
1.1 gpf and 1.6 gpf

Bathroom Sinks:
SLOAN EAF-275
0.35 gpm

SLOAN Waterfree Urinal (WES-1000)
0.0 gpf flush rate

Kitchenette Sink:
NEOPERL Faucet Aerator
0.5 gpm flow rate

DELTA Showerhead #8
1.6 gpm

MATERIALS

UltraTouch Denim Insulation, by Bonded Logic
- 90% Post-Consumer Recycled Content
- 70% Rapidly Renewable (cotton)
- Energy Star Qualified (seal & insulate)
- R-Value = 13 (insulation effectiveness)

Architectural Wood Door #5502A, by VT Industries
- 90% Pre-Consumer Recycled Content
- 9.7% FSC Wood
- No Added Urea Formaldehyde

Wheatboard, by Kirei
- 90% Rapidly Renewable (non-edible portion of wheat stalks)
- 90% Post-Consumer Recycled Content
- No Added Urea Formaldehyde
- VOC Free

Eames Meeting Table, by Herman Miller
- 3% Post-Consumer Recycled Content
- 67% Pre-Consumer Recycled Content

Meridian File Cabinets, by Herman Miller
- 24% Post-Consumer Recycled Content
- 5% Pre-Consumer Recycled Content

Caper Stacking Chair, by Herman Miller
- 18% Post-Consumer Recycled Content
- 7% Pre-Consumer Recycled Content
- GREENGUARD Certified & No VOCs
- MBDC Silver Cradle to Cradle certified
